

# QEEG Clinical Report

EEGLens

The QEEG report is provided by NPCindex Company, operating under the QEEGhome brand.

## Personal Data:

Name:  
Gender:  
Age:  
Handedness:

## Clinical Data:

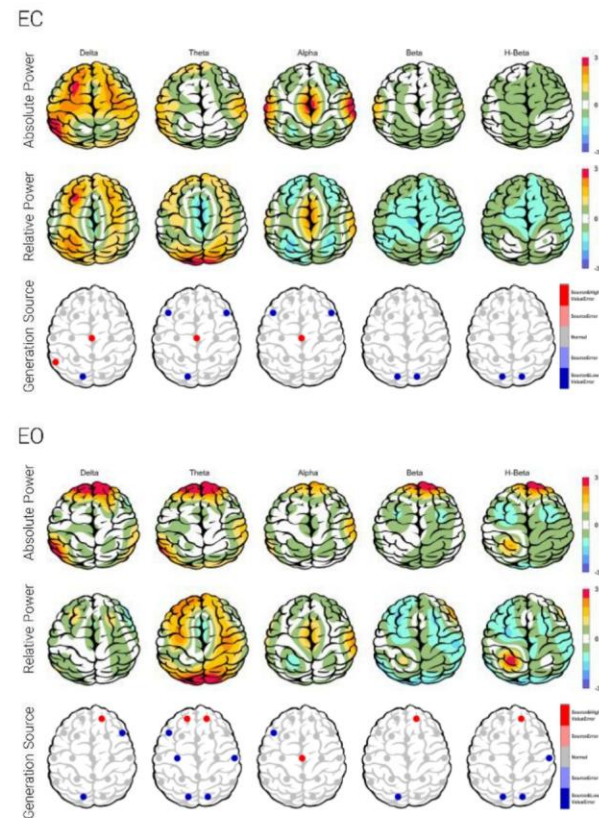

Initial diagnosis:  
Medication:  
Date of Recording:  
Source of Referral:

This case belongs to

## EEG Quality

## Z-score Information

## TMS Responsibility

## Pathological Assessment

## EEG Neuromarker Values

Neuromarker	Region	Value	Assessment
APF - EO	Frontal	10.00	Normal
AFP - EC	Frontal	09.83	Normal
APF - EO	Occipital	10.38	Normal
AFP - EC	Occipital	09.62	Normal
Arousal Level - EO	-	-	Normal
Arousal Level - EC	-	-	Normal

## Denoising Information

■ Eye Close

Raw EEG

Rejected Channel

**Total Recording Time Remaining:**

240.02 sec

**Number of Eye and Muscle Elements**

Eye: 2

Muscle: 0

Low Artifact Percentage

High Artifact Percentage

Total Artifact Percentage

**EEG Quality:** good

Denoised EEG

Flat Channel

■ Eye Open

Raw EEG

Rejected Channel

**Total Recording Time Remaining:**

289.23 sec

**Number of Eye and Muscle Elements**

Eye: 2

Muscle: 1

Low Artifact Percentage

High Artifact Percentage

Total Artifact Percentage

**EEG Quality:** good

Denoised EEG

Flat Channel

## Pathological Assessment

### Main Diagnosis: Adult ADHD

#### Description

According to the guidelines, the initial diagnosis of adult ADHD could have comorbidities such as **alcohol abuse, anxiety, and depression**. It also differentially diagnoses with **depression, anxiety, and BMD**.

In the above graph, the **red area** shows the percentage of each comorbidity from your patient's EEG markers. Observe that each comorbidity marker is not unique and can be shared with other comorbidities.

Side circles in the above graph represent the differential diagnosis between depression and its misdiagnosis conditions based on your patient's EEG markers and trained artificial intelligence. The differential diagnosis probability is represented by **the bold blue bars** in the circles, and the probability of depression is represented by the **gray bars**.

**Note:** In case your patient has drug abuse, obtain the substance abuse pathologic page of QEEGhome by registering the diagnosis under the initial diagnoses section of the website.

### About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between rTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

## Vigilance

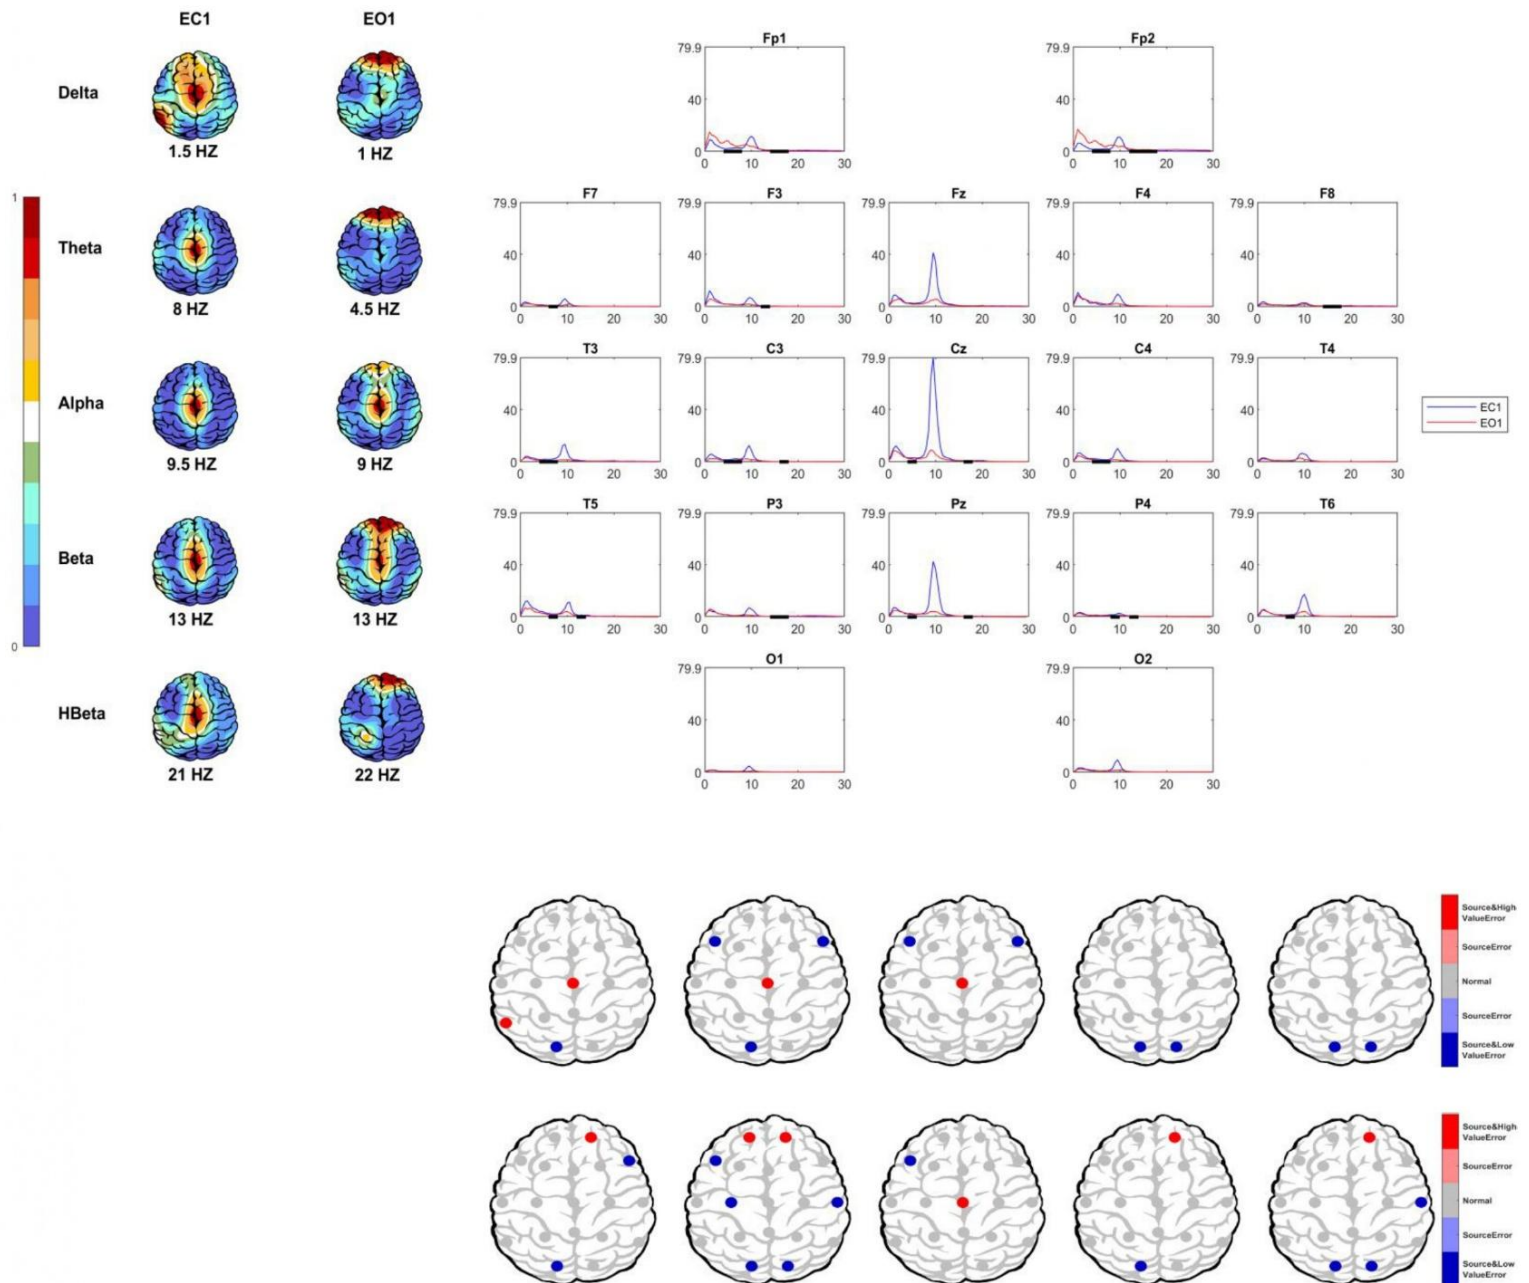

**Vigilance Slope**  
**EC:0.39** **EO:0.10**

## EEG Neuromarker Values

Neuromarker	Region	Value	Assessment
APF - EO	Frontal	10.00	Normal
AFP - EC	Frontal	09.83	Normal
APF - EO	Occipital	10.38	Normal
AFP - EC	Occipital	09.62	Normal
Alpha Asymmetry - EO	Frontal	-0.15	Anhedonia
Alpha Asymmetry - EC	Frontal	-0.15	Anhedonia
Alpha Asymmetry - EO	Occipital	-0.28	Anhedonia
Alpha Asymmetry - EC	Occipital	-0.33	Anhedonia
Beta Asymmetry - EO	Frontal	-0.10	Anxiety
Beta Asymmetry - EC	Frontal	00.03	Anhedonia
Alpha Blocking	-	-	Not Observed
Arousal Level - EO	-	-	Normal
Arousal Level - EC	-	-	Normal
Vigilance Level - EO	-	06.00	Normal
Vigilance Level - EC	-	03.00	Normal
Vigilance Mean - EO	-	05.06	Normal
Vigilance Mean - EC	-	02.47	Normal
Vigilance Regulation - EO	-	00.10	Normal
Vigilance Regulation - EC	-	00.39	Normal
Vigilance 0 Stage (%) - EO	-	52.92	Normal
Vigilance 0 Stage (%) - EC	-	00.00	Normal
Vigilance A1 Stage (%) - EO	-	00.00	-
Vigilance A1 Stage (%) - EC	-	00.83	-
