

QEEG Clinical Report

EEGLens

The QEEG report is provided by NPCindex Institute, operating under the QEEGhome brand.

Personal Data:

Name: Test Test

Gender: Male

Age: 2002-02-12 - 24.1

Handedness: Left

Clinical Data:

Initial diagnosis: OCD

Medication: -

Date of Recording: 2025-12-22

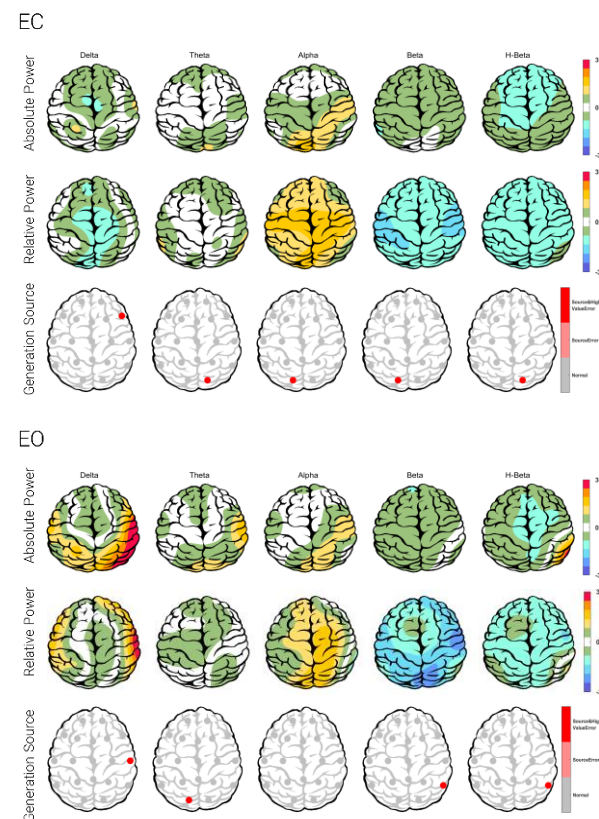

Source of Referral: Dr Test

This case belongs to Dr Test

EEG Quality

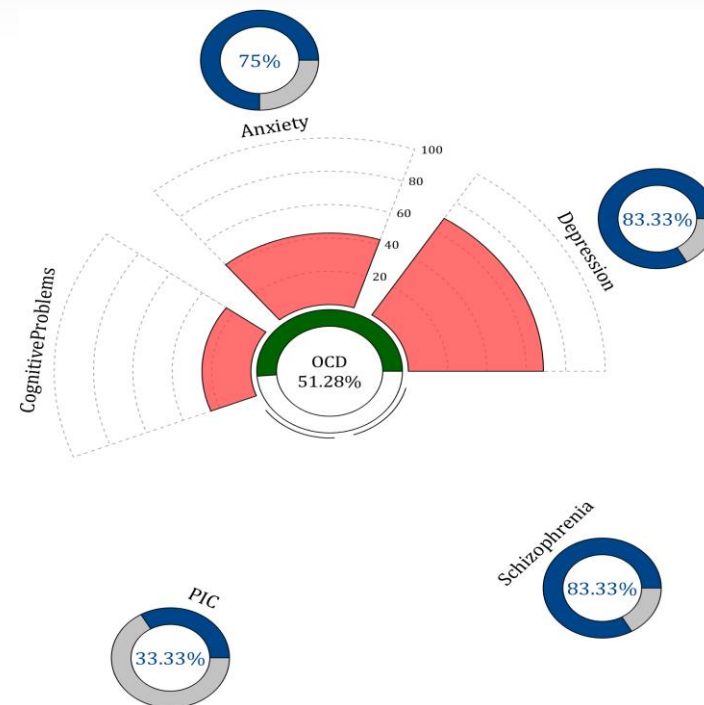

Z-score Information

TMS Responsibility

Pathological Assessment

EEG Neuromarker Values

Neuromarker	Region	Value	Assessment
APF - EO	Frontal	09.92	Normal
APF - EC	Frontal	10.00	Normal
APF - EO	Occipital	09.62	Normal
APF - EC	Occipital	09.88	Normal
Arousal Level - EO	-	-	Normal
Arousal Level - EC	-	-	Normal

Denoising Information

Eye Close

Raw EEG

Rejected Channel

Total Recording Time Remaining:

Eye: 2

Muscle: 0

Low Artifact Percentage

High Artifact Percentage

Total Artifact Percentage

EEG Quality: perfect

Denoised EEG

Flat Channel

Pathological Assessment

Main Diagnosis: OCD

Description

According to the guidelines, the initial diagnosis of OCD could have comorbidities such as **alcohol abuse, depression, and anxiety**. It also differentially diagnoses with **anxiety, impulsive control disorder, depression, and schizophrenia**.

In the above graph, the **red area** shows the percentage of each comorbidity from your patient's EEG markers. Observe that each comorbidity marker is not unique and can be shared with other comorbidities.

Side circles in the above graph represent the differential diagnosis between depression and its misdiagnosis conditions based on your patient's EEG markers and trained artificial intelligence. The differential diagnosis probability is represented by the **bold blue bars** in the circles, and the probability of depression is represented by the **gray bars**.

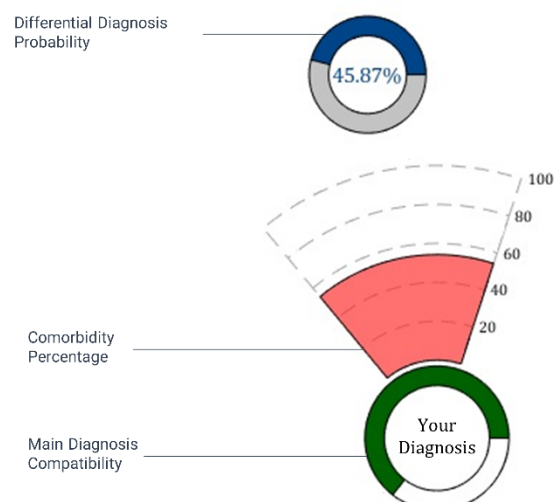

Note: In case your patient has drug abuse, obtain the substance abuse pathologic page of QEEGhome by registering the diagnosis under the initial diagnoses section of the website.

User Manual

This section is only meant to explain the different parts of the pathologic chart and is not related to your patient's data.

QEEG Based Predicting Medication Response

Explanation

These two tables present the primary neuromarker findings from NPCindex Research Institute, derived from our research on medication-free Iranian cohorts.

The NPCindex team identified and validated 85 candidate features across raw bands, spectra, power, coherence, and LORETA, and report them here without sub-segregation to minimize complexity.

For context and methodology, see qeehome.com.

Medication Recommendation

Use the medication charts in three quick steps:

- 1- Filter the medication groups by your working diagnosis.
- 2- Within each group, re-filter by your clinical assessment and the patient's specifics (comorbidities, contraindications, preferences).
- 3- From the remaining options, use the reported effect sizes to choose.

Based on papers, following this workflow has raised our response rates by ~20-30%.

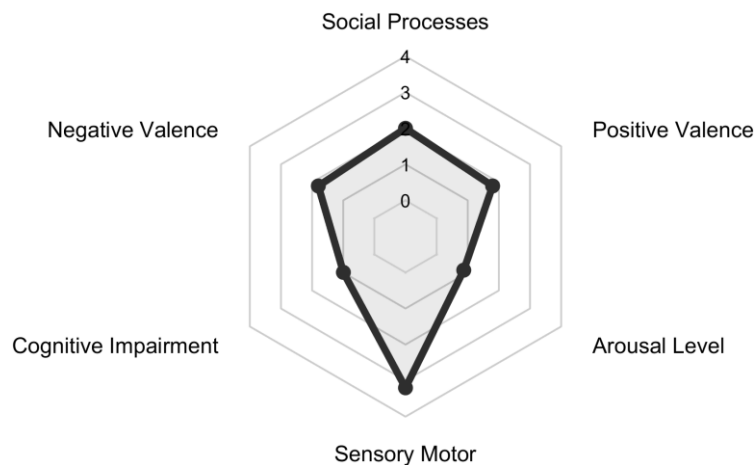

Vigilance

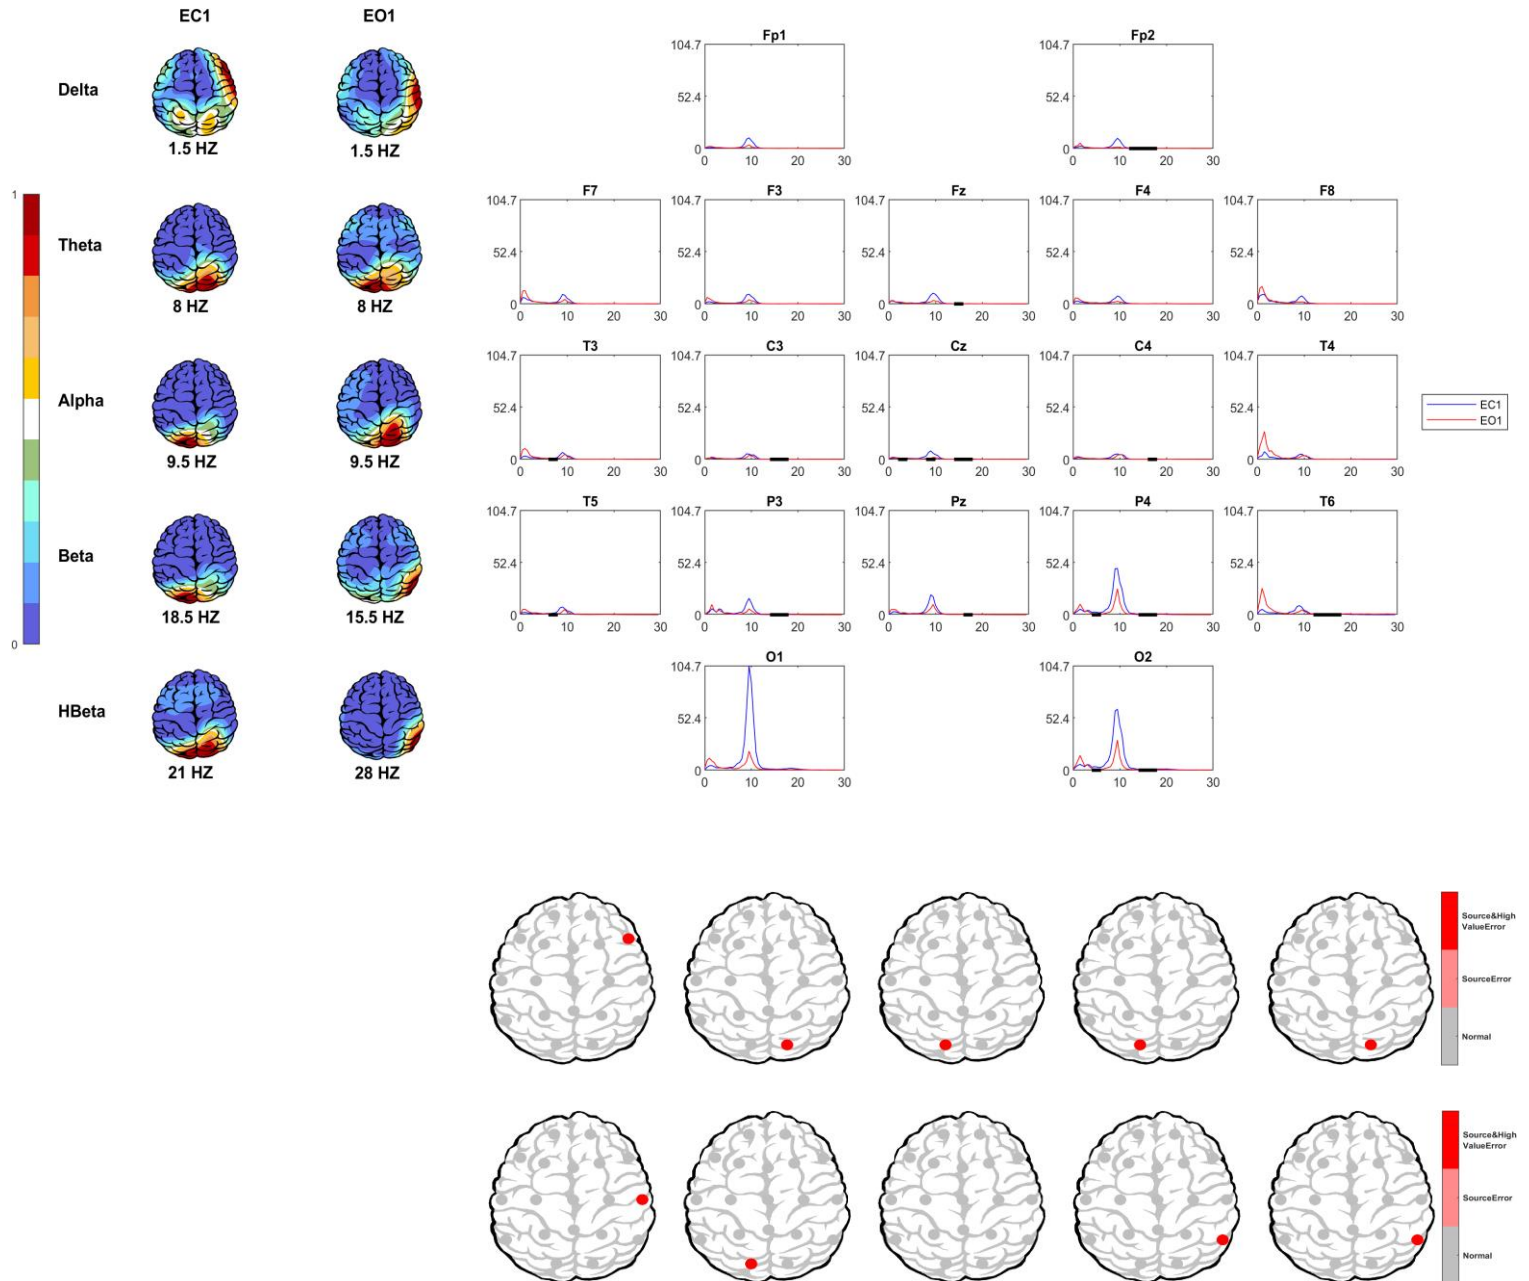

EEG Neuromarker Values

Neuromarker	Region	Value	Assessment
APF - EO	Frontal	09.92	Normal
APF - EC	Frontal	10.00	Normal
APF - EO	Occipital	09.62	Normal
APF - EC	Occipital	09.88	Normal
Alpha Asymmetry	Frontal	00.13	Anxiety
Alpha Asymmetry	Occipital	00.20	Anxiety
Beta Asymmetry	Frontal	-0.10	Anxiety
Alpha Blocking Error	-	-	Not
Vigilance Level - EO	-	04.00	Normal
Vigilance Level - EC	-	05.00	Normal
Vigilance Mean - EO	-	04.61	Normal
Vigilance Mean - EC	-	04.81	Normal
Vigilance Regulation - EO	-	00.11	Normal
Vigilance Regulation - EC	-	00.26	Normal
Vigilance 0 Stage (%) - EO	-	30.69	Normal
Vigilance 0 Stage (%) - EC	-	00.00	Normal
Vigilance A1 Stage (%) - EO	-	00.00	-
Vigilance A1 Stage (%) - EC	-	87.13	-
