

QEEG Clinical Report BrainLens V0.4

Report Description

Personal & Clinical Data

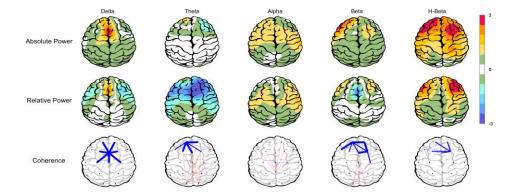

Name	Anis Basiya	Date of Recording	05-Feb-2025		
Date of Birth - Age	26-Mar-2000 - 24.68	Gender	Female		
Handedness(R/L)	Right	Source of Referral	Asayesh Psychiatric Clinic -		
Initial Diagnosis	Anxiety-Depression				
Current Medication	Buspirone-Carbamazepine-Clonidine-Imipramine-Paroxetine				

Asayesh Psychiatric Clinic -Dr Torabi

APF

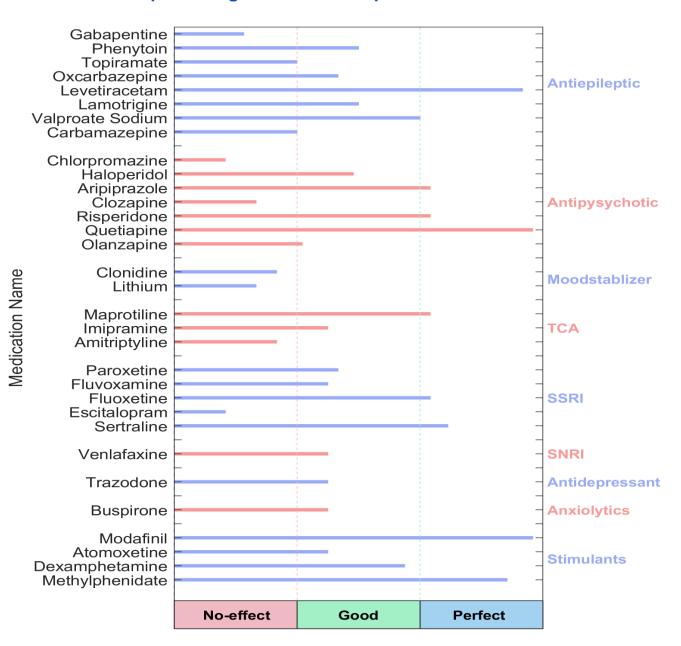

QEEG based predicting medication response

Explanation

Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.
