

QEEG Clinical Report

BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Aeenbarmala	Date of Recording	23-Feb-2025
Date of Birth - Age	01-Jan-1970 - 55.14	Gender	Male
Handedness(R/L)	Right	Source of Referral	Ms Mazlumi
Initial Diagnosis	-		
Current Medication	-		

Ms Mazlumi

Summary Report

EEG Quality

Z-score Information

Compatibility with Depression

Compatibility with Mood Swing

Compatibility with Anxiety

Arousal Level

TMS Responsibility

Cognitive Performance

APF

Posterior APF-EC= 09.25

To investigate QEEG-based predicting medication response, please refer to the Report.

Denoising Information (EC)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements

Eye 0 Muscle 0

Total Artifact Percentage

EEG Quality bad

Low Artifact Percentage

High Artifact Percentage

Total Recording Time Remaining 40.74 sec

Pathological assessment for mood disorders and adult ADHD

Compare to Mood Disorders Database

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

Alpha Asymmetry(AA)

APF(EC)

Frontal APF= 08.00

Posterior APF= 09.25

Absolute Power-Eye Closed (EC)

Relative Power-Eye Closed (EC)
