

QEEG Clinical Report

BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Ehsan Abaszade	Date of Recording	2025-04-07
Date of Birth - Age	2008-04-19 - 17.2	Gender	Male
Handedness(R/L)	Right	Source of Referral	Asayesh Psychiatric Clinic -
Initial Diagnosis	ADHD-Puberty-Gaimer		
Current Medication	Fluoxetine		

Asayesh Psychiatric Clinic -
Dr Torabi

Z Score Summary Information (EC)

Z Score Summary Information (EO)

E.C.T/B Ratio (Raw- Z Score)

E.O.T/B Ratio (Raw- Z Score)

Arousal Level

High beta, IAF, Right-posterior delta, Visual-area alpha, Frontal alpha, Prefrontal beta, Temporal beta, Occipital beta, Central beta

APF(EO)

Frontal APF= 10.25

Posterior APF= 10.12

APF(EC)

Frontal APF= 09.83

Posterior APF= 10.00

EEG Spectra

Alpha Asymmetry(AA)

Alpha Blocking

QEEG based predicting medication response

Explanation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmacoe EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

Medication Recommendation

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

Denoising Information (EC)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements

Eye	0	Muscle	1
-----	---	--------	---

Total Artifact Percentage

EEG Quality	bad
-------------	-----

Low Artifact Percentage

High Artifact Percentage

Total Recording Time Remaining	109.94 sec
--------------------------------	------------

Denoising Information (EO)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements

Eye	2	Muscle	4
-----	---	--------	---

Total Artifact Percentage

EEG Quality	bad
-------------	-----

Low Artifact Percentage

High Artifact Percentage

Total Recording Time Remaining	156.40 sec
--------------------------------	------------

Absolute Power-Eye Closed (EC)
