

QEEG Clinical Report

BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Tania Sedghi	Date of Recording	2025-05-08
Date of Birth - Age	2013-04-25 - 12.04	Gender	Female
Handedness(R/L)	Right	Source of Referral	Clinicbrain
Initial Diagnosis	Anxiety-Low Concentration-Stress		
Current Medication	-		

Clinicbrain

Summary Report

EEG Quality

Z-score Information

Compatibility with ADHD

Arousal Level

Low Arousal

Normal

High arousal

APF

Posterior APF-EC= 09.75

Posterior APF-EO= 09.75

Absolute Power
Relative Power

To investigate QEEG-based predicting medication response, please refer to the Report.

Denoising Information (EC)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements

Eye 2 Muscle 0

Total Artifact Percentage

EEG Quality good

Low Artifact Percentage

High Artifact Percentage

Total Recording Time Remaining 222.66 sec

Denoising Information (EO)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements

Eye 4 Muscle 0

Total Artifact Percentage

EEG Quality good

Low Artifact Percentage

High Artifact Percentage

Total Recording Time Remaining 214.55 sec

Pathological assessment for ADHD

Compare to ADHD Database

EEG Compatibility with ADHD Diagnosis

Arousal Level Detection

ADHD Clustering *

1. Prone to moody behavior and temper tantrums. May respond to stimulants, consider anticonvulsants or clonidine, avoid SSRI.
2. Same inattentive and hyperactive prevalence. Well respond to stimulants.

* If there is Paroxymal epileptic discharge in EEG data, this case needs sufficient sleep and should avoid high carbohydrate intake.
You can consider anticonvulant medications.

QEEG based predicting medication response

Explanation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmacoe EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

Medication Recommendation

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

APF(EO)

Frontal APF= 09.50

Posterior APF= 09.75

APF(EC)

Frontal APF= 09.42

Posterior APF= 09.75

EEG Spectra

Alpha Asymmetry(AA)

Alpha Blocking

Z Score Summary Information (EC)

Z Score Summary Information (EO)

E.C.T/B Ratio (Raw- Z Score)

Arousal Level

E.O.T/B Ratio (Raw- Z Score)

Absolute Power-Eye Closed (EC)

Relative Power-Eye Closed (EC)

Absolute Power-Eye Open (EO)
