

Report Description

Personal & Clinical Data

Name	Seyed Abolghasem	Date of Recording	2025-07-21				
Date of Birth - Age	1955-04-23 - 70.3	Gender	Male				
Handedness(R/L)	Right	Source of Referral	Dr Atena Fallah-Psychiatrist				
Initial Diagnosis	Tinnitus						
Current Medication		-					

Dr Atena Fallah-Psychiatrist

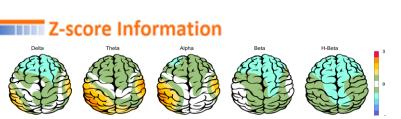

Relative Power

Cognitive Performance

O

Compatibility with Anxiety

Compatibility with Dementia

TMS Responsibility

APF

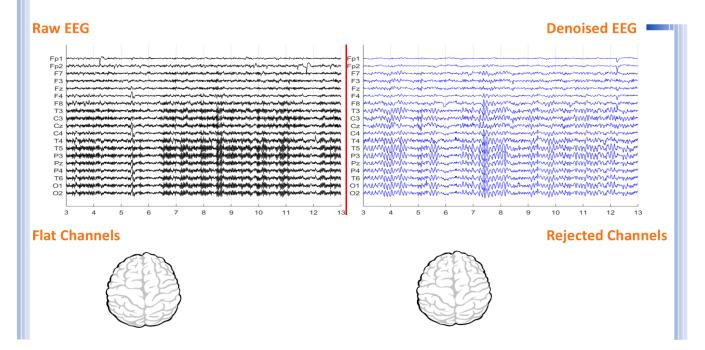

Posterior APF-EC= **08.50**

Posterior APF-EO= 08.88

To investigate QEEG-based predicting medication response, please refer to the Report.

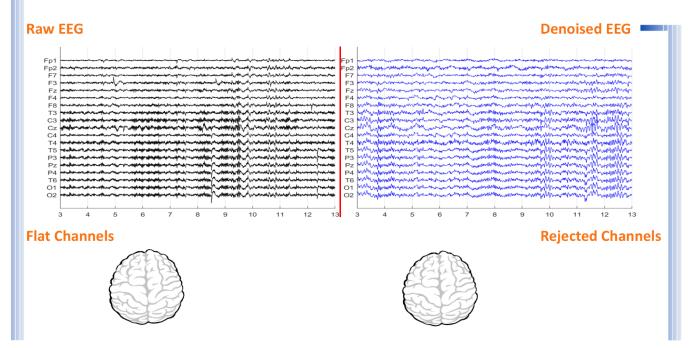

Denoising Information (EC)

Number of Eye and Muscle Elements			Low Artifact Percentage		
Eye	2	Muscle	0	0	
Total Artifact Percentage			High Artifact Percentage		
0			0		
EEG Quality		bad		Total Recording Time Remaining 166.11 sec	

Denoising Information (EO)

Number of Eye and Muscle Elements			Low Artifact Percentage		
Eye	0	Muscle	0		
Total Artifact Percentage			High Artifact Percentage		
			0		
EEG Quality bad		Total Recording Time Remaining	164.66 sec

QEEG based predicting medication response

Explanation

factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two tables can be considered the most

Medication Recommendation

two charts, calculate probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

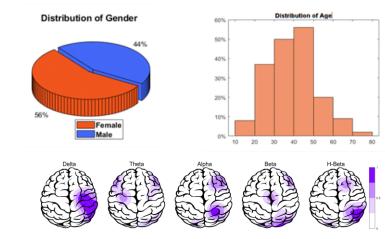

rTMS Response Prediction

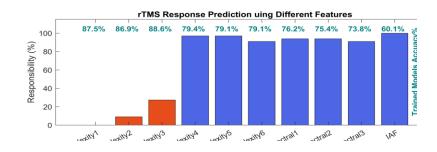

Network Performance

Accuracy: 92.1% Sensitivity: 89.13% Specificity: 97.47%

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

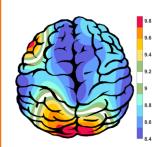

APF(EO)

Frontal APF= 09.25

Posterior APF= 08.88

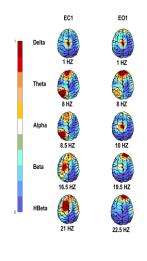

APF(EC)

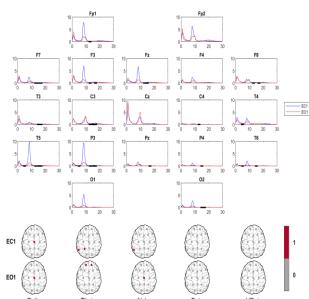

Frontal APF= 08.67

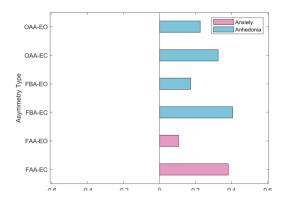

Posterior APF= 08.50
