

# QEEG Clinical Report BrainLens V0.4

# Report Description

### Personal & Clinical Data

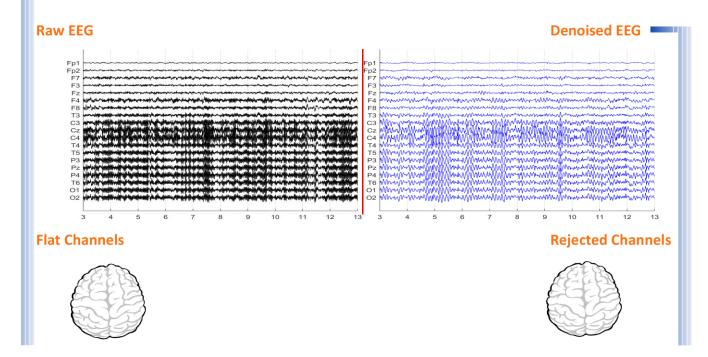

Name	Donya Adabi	Date of Recording	2025-09-17	
Date of Birth - Age	1989-07-23 - 36.2	Gender	Female	
Handedness(R/L)	Right	Source of Referral	Dr Atena Fallah	
Initial Diagnosis	Depression			
Current Medication	Duloxetine			

Dr Atena Fallah

# **Denoising Information**

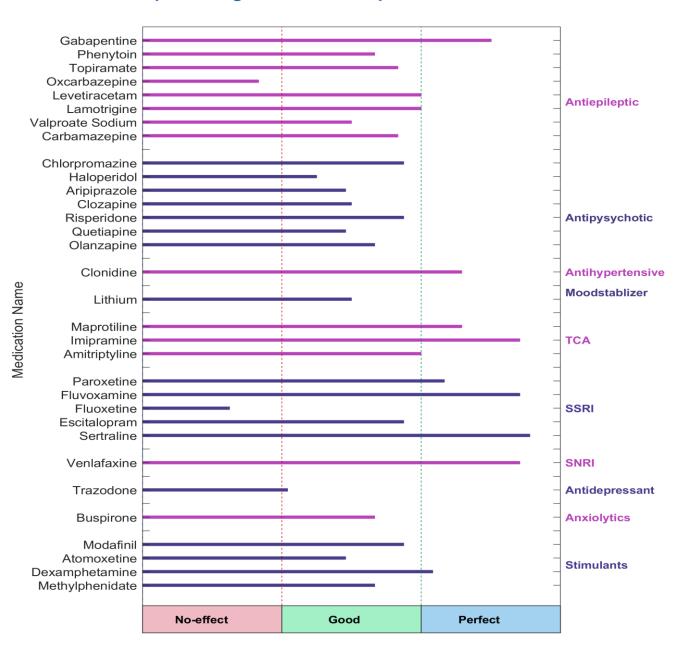

Number of Eye and Muscle Elements			Low Artifact Percentage		
Eye	1	Muscle	0	0	
Total Artifact Percentage				High Artifact Percentage	
()			0		
<b>EEG Quali</b>	ity	bad		<b>Total Recording Time Remaining</b> 178.30 sec	

### QEEG based predicting medication response

### Explanation

#### Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

two charts, calculate probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.
