# QEEG Clinical Report BrainLens V0.4

## Report Description

### Personal & Clinical Data

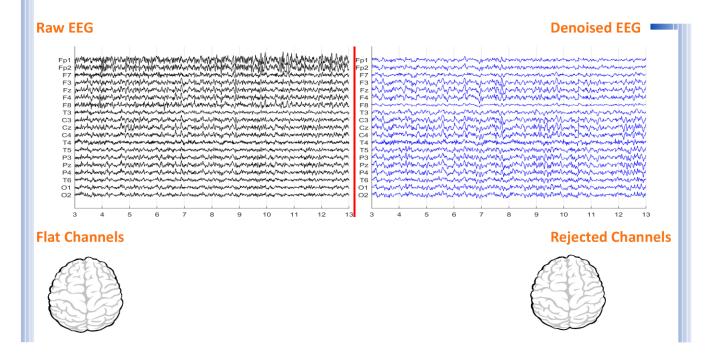

Name	Arian Shoaara	Date of Recording	20-Oct-2024					
Date of Birth - Age	22-Sep-2001 - 23.08	Gender	Male					
Handedness(R/L)	Right	Source of Referral	Dr Sahraian					
Initial Diagnosis	MDD							
Current Medication	Medication Free							

Dr Sahraian

### Denoising Information (EC)

Number of Eye and Muscle Elements		Low Artifact Percentage					
Eye 3 Muscle 0							
Total Artifact Percentage		High Artifact Percentage					
0		0					
<b>EEG Quali</b>	G Quality good		<b>Total Recording Time Remaining</b> 331.70 sec				

### Pathological assessment for mood disorders

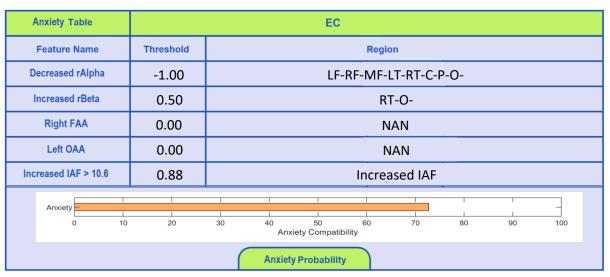

### **Compare to Mood Disorders Database**

#### **EEG Compatibility with Depression Diagnosis**

Depression	Table		EC								
Feature N	ame	Threshold	Threshold Region								
Increased Glob	al rAlpha	0.00	NAN								
Increased glob	al rTheta	1.00		global							
Decreased	rDelta	0.00				N/	λN				
Increased	rBeta	0.50				RT-	-0-				
Left FA	A	-0.05		Left FAA							
Right O	λA	0.01		Right OAA							
Decreased Coher	ence (D, T)	-0.50		Decreased Coherence (D,T)							
Increased Cohere	ence (A, B)	0.00		NAN							
depression		10 20	30	40 Depre	50 ession Comp	60 atibility	70	80	90	100	
Depression Probability											

### **EEG Compatibility with Anxiety Diagnosis**

### EEG Compatibility with Mood Swings Diagnosis \*

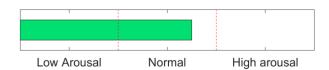

Mood Swings Table		EC								
Feature Name	Threshold	Threshold Region								
Decreased rAlpha	-1.00	-1.00 LF-RF-MF-LT-RT-C-P-O-								
Increased (rDelta+rTheta)	1.00			L	F-RF-MF	-LT-RT-C	-P-O-			
Increased rBeta	0.50	RT-O-								
Decreased Alpha Coherence	0.00	NAN								
Right FAA	0.00		NAN							
BMD 10	20	30	40 Mood s	50 Swing Comp	60 atibility	70	80	90	100	
Mood Swings Probability										

\* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

### Cognitive Functions

### Arousal Level Detection

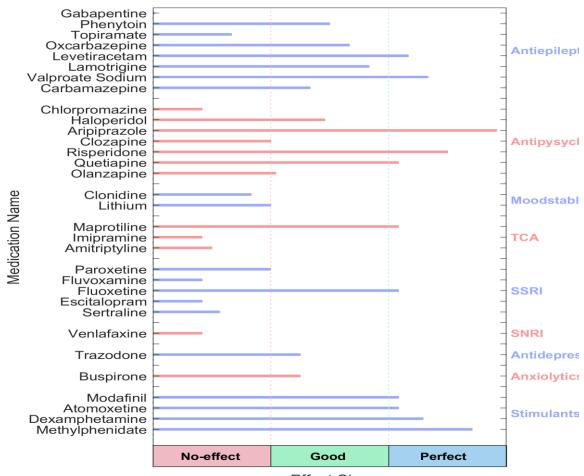

### QEEG based predicting medication response

Effect Size

### **Explanation**

#### Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

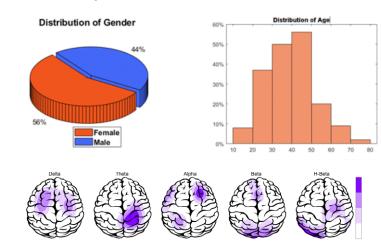

#### rTMS Response Prediction

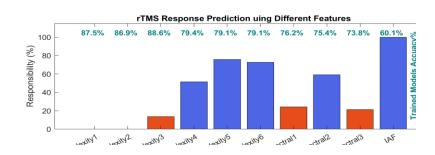

#### Network Performance

Accuracy: 92.1% Sensitivity: 89.13% Specificity: 97.47%

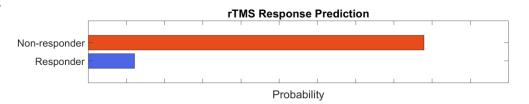

#### Participants Information

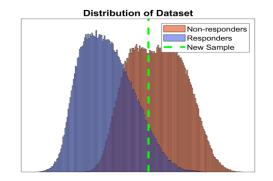

#### Features Information

#### Responsibility

#### Data Distribution

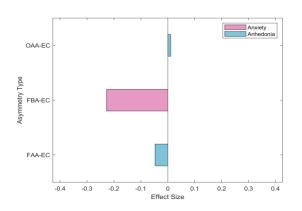

#### About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

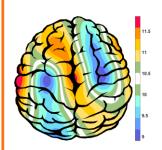

### Alpha Asymmetry(AA)

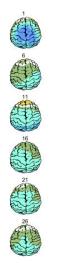

### APF(EC)

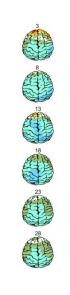

Frontal APF= 09.08

Posterior APF= 11.38

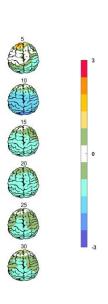

### Absolute Power-Eye Closed (EC) 🌮

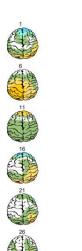

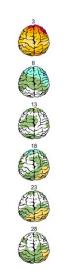

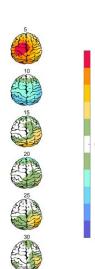

### Relative Power-Eye Closed (EC) 🌮

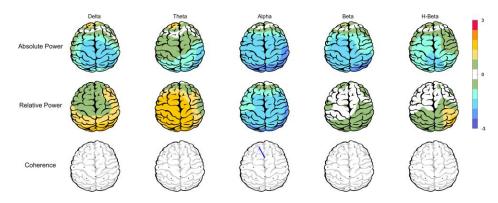

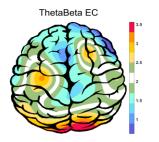

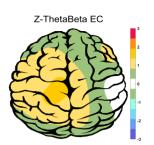

### Z Score Summary Information (EC)

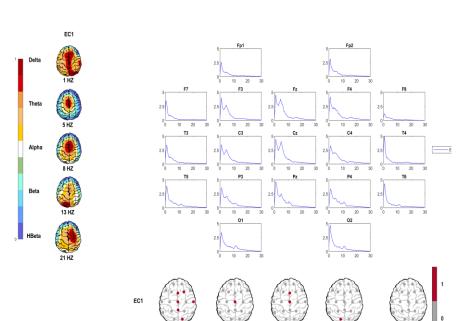

### E.C.T/B Ratio ( Raw- Z Score)

### EEG Spectra

### Arousal Level
