

QEEG Clinical Report

BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Amirahmad Rezaii	Date of Recording	08-Oct-2024
Date of Birth - Age	17-Aug-2007 - 17.14	Gender	Male
Handedness(R/L)	Right	Source of Referral	Movasatschool
Initial Diagnosis	Adult ADHD		
Current Medication	Medication Free		

Movasatschool

Denoising Information (EC)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements				Low Artifact Percentage	
Eye	0	Muscle	0		
Total Artifact Percentage				High Artifact Percentage	
EEG Quality		bad		Total Recording Time Remaining	269.39 sec

Denoising Information (EO)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements				Low Artifact Percentage	
Eye	1	Muscle	0		
Total Artifact Percentage				High Artifact Percentage	
EEG Quality		bad		Total Recording Time Remaining	301.32 sec

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between rTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

APF(EO)

Frontal APF= 11.00

Posterior APF= 10.63

APF(EC)

Frontal APF= 10.75

Frontal APF= 10.50
