

QEEG Clinical Report BrainLens V0.4

Report Description

Personal & Clinical Data

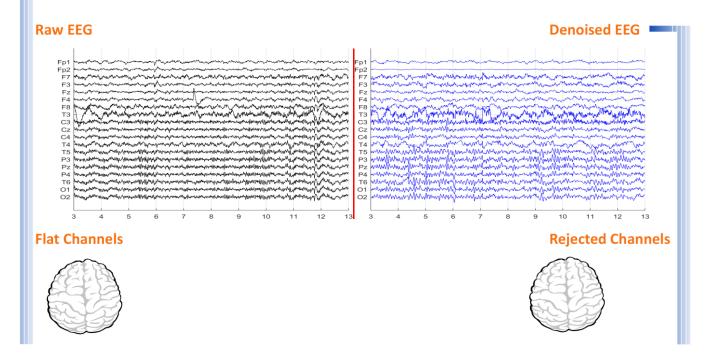

Name	Fateme Aboyi	Date of Recording	26-Oct-2024			
Date of Birth - Age	09-Feb-1985 - 39.71	Gender	Female			
Handedness(R/L)	Right	Source of Referral	Dr Fallah			
Initial Diagnosis	Psychosis-OCD-Tinnitus					
Current Medication	Asentra-Fluvoxamine-Propranolol-Risperidone					

Dr Fallah

Denoising Information (EC)

Number of Eye and Muscle Elements		Low Artifact Percentage				
Eye	3	Muscle	0	0		
Total Arti	Total Artifact Percentage			High Artifact Percentage		
EEG Quali	ity	bad		Total Recording Time Remaining	120.56 sec	

Pathological assessment for mood disorders

EEG Compatibility with Anxiety Diagnosis

EEG Compatibility with Mood Swings Diagnosis *

Mood Swings Table	EC						
Feature Name	Threshold	old Region					
Decreased rAlpha	-0.50	LT-RT-O-					
Increased (rDelta+rTheta)	1.00	LF-RF-LT-RT-O-					
Increased rBeta	0.00	NAN					
Decreased Alpha Coherence	-1.00	Decreased Alpha Coherence					
Right FAA	0.15	Right FAA					
BMD 10	20	30 40 50 60 70 80 90 100 Mood Swing Compatibility					
Mood Swings Probability							

* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

Cognitive Functions

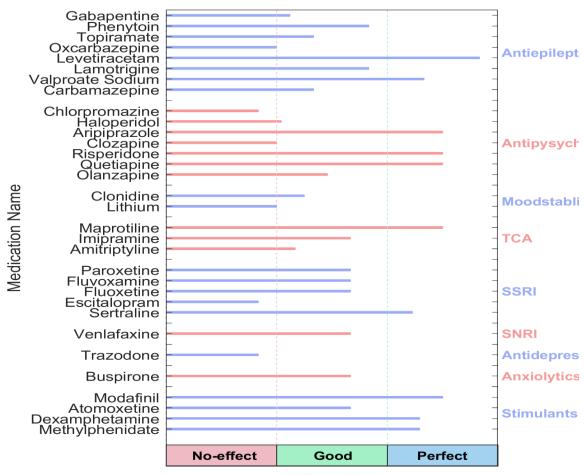

•QEEG based predicting medication response

Effect Size

Explanation

Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

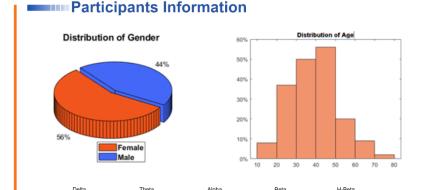

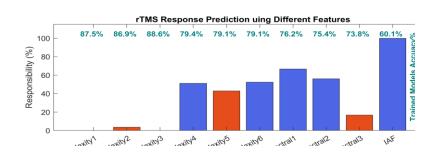

rTMS Response Prediction

Network Performance

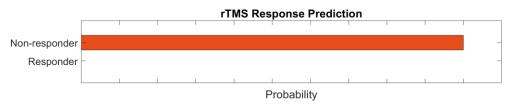

Accuracy: 92.1% Sensitivity: 89.13% Specificity: 97.47%

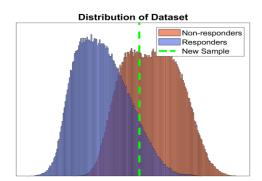

Features Information

Data Distribution

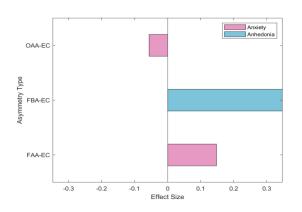

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

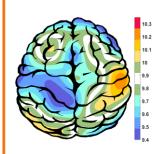

Alpha Asymmetry(AA)

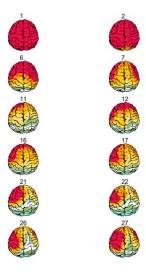

APF(EC)

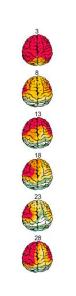

Frontal APF= 09.75

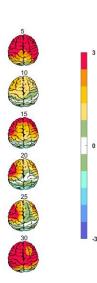

Posterior APF= 09.62

Absolute Power-Eye Closed (EC) 🌮

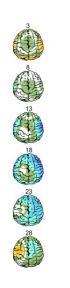

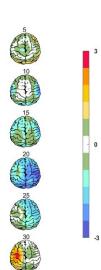

Relative Power-Eye Closed (EC) 🌮
