

QEEG Clinical Report BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Erfaneh Ahmadi	Date of Recording	10-Nov-2024		
Date of Birth - Age	28-Mar-1998 - 26.62	Gender	Female		
Handedness(R/L)	Right	Source of Referral	Dr Dehghani		
Initial Diagnosis	Anxiety-Attention and Concentration Problem				
Current Medication		-			

Dr Dehghani

Denoising Information (EC)

Number of Eye and Muscle Elements			Low Artifact Percentage			
Eye 1 Muscle 0						
Total Artifact Percentage		High Artifact Percentage				
				0		
EEG Quali	ty	good		Total Recording Time Remaining 260.91 sec		

Denoising Information (EO)

Number of Eye and Muscle Elements		Low Artifact Percentage				
Eye	3	Muscle 0				
Total Artifact Percentage		High Artifact Percentage				
0		0				
EEG Quality		bad		Total Recording Time Remaining	210.58 sec	

Pathological assessment for mood disorders and adult ADHD

Compare to Mood Disorders Database

EEG Compatibility with Depression Diagnosis

Depression Table	EC		EO		
Feature Name	Threshold	Region	Threshold	Region	
Increased Global rAlpha	0.00	NAN	0.00	NAN	
Increased global rTheta	0.00	NAN	0.00	NAN	
Decreased rDelta	0.00	NAN	0.00	NAN	
Increased rBeta	0.50	P-O-	0.00	NAN	
Left FAA	-0.01	Left FAA	-0.22	Left FAA	
Right OAA	0.00	NAN	0.00	NAN	
Decreased Coherence (D, T)	-0.50 Decreased Coherence		-0.50	Decreased Coherence	
Increased Coherence (A, B)	0.00 NAN		0.50	Increased Coherence	
depression 0 10) 20	30 40 50 60 Depression Compatibility))) 70	80 90 100	
Depression Probability					

EEG Compatibility with Anxiety Diagnosis

Anxiety Table	EC		EO		
Feature Name	Threshold	Region	Threshold	Region	
Decreased rAlpha	-0.50	LT	-0.50	LF-RF-MF-O-	
Increased rBeta	0.50	50 P-O-		NAN	
Right FAA	0.00	NAN	0.00	NAN	
Left OAA	-0.03	Left OAA	-0.00	Left OAA	
Increased IAF > 10.6	0.25	0.25 Increased IAF 0.00 NAN		NAN	
Anxiety 0 10	20	30 40 50 60 Anxiety Compatibility	1 70	80 90 100	
Anxiety Probability					

EEG Compatibility with Mood Swings Diagnosis

Mood Swings Table	EC		EO		
Feature Name	Threshold	Region	Threshold	Region	
Decreased rAlpha	-0.50	LT	-0.50	LF-RF-MF-O-	
Increased (rDelta+rTheta)	0.50 LT		0.50	RF-RT-O-	
Increased rBeta	0.50	P-O-	0.00	NAN	
Decreased Alpha Coherence	-1.00	Decreased Alpha	-0.50	Decreased Alpha	
Right FAA	0.00	NAN	0.00	NAN	
BMD 10	20 3	1	T 70	80 90 100	
Mood Swings Probability					

* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

QEEG based predicting medication response

Explanation

Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

two charts, calculate probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

rTMS Response Prediction

Network Performance

Accuracy: 92.1% Sensitivity: 89.13% Specificity: 97.47%

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

APF(EO)

Frontal APF= 09.92

Posterior APF= 10.25

APF(EC)

Frontal APF= 10.00
