

# QEEG Clinical Report BrainLens V0.4

# Report Description

# Personal & Clinical Data

Name	Kourosh Pirastefar	Date of Recording	26-May-2024	
Date of Birth - Age	28-Aug-1975 - 48.74	Gender	Male	
Handedness(R/L)	Right	Source of Referral	Soshiyan Center Clinic	
Initial Diagnosis	Depression- ADHD-Anxiety-Cognition disorder (memory)			
Current Medication	Asentra-Trifluoperazine			

Soshiyan Center Clinic

### Denoising Information (EC)

Number of Eye and Muscle Elements		Low Artifact Percentage			
Eye	2	Muscle	0	0	
Total Artifact Percentage		High Artifact Percentage			
0					
EEG Quali	ity	good		Total Recording Time Remaining	217.01 sec

# Pathological assessment for mood disorders

#### **Compare to Mood Disorders Database**

#### **EEG Compatibility with Depression Diagnosis**

Depression Table	EC		
Feature Name	Threshold	Region	
Increased Global rAlpha	0.50	global	
Increased global rTheta	0.00	NAN	
Decreased rDelta	0.00	NAN	
Increased rBeta	0.00	NAN	
Left FAA	-0.03	Left FAA	
Right OAA	0.00	NAN	
Decreased Coherence (D, T)	-0.50	Decreased Coherence (D,T)	
Increased Coherence (A, B)	2.00	Increased Coherence (A,B)	
depression 0	10 20	30 40 50 60 70 80 90 100 Depression Probability	
Depression Probability			

# **EEG Compatibility with Anxiety Diagnosis**

#### **EEG Compatibility with Mood Swings Diagnosis \***

\* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

# **Depression Severity**

**Anxiety Severity** 

#### Arousal Level Detection

# Pathological assessment for adult ADHD

# **Compare to Adult ADHD Database**

# **Cognitive Functions**

#### **Arousal Level Detection**

# **Adult ADHD Severity**

#### QEEG based predicting medication response

# **Explanation**

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

#### About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.
