

# Report Description

## Personal & Clinical Data

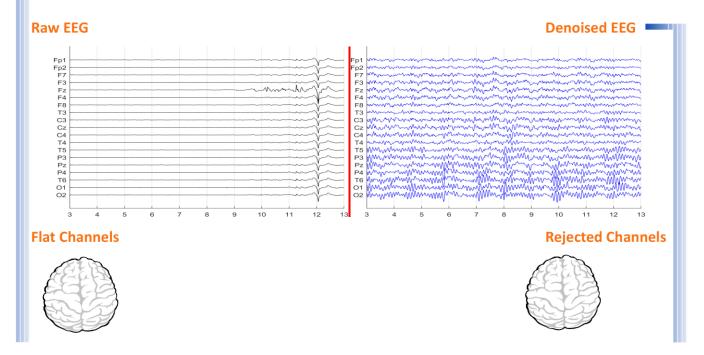

Name	Maryam Nateghzadeh	Date of Recording	02-Oct-2024
Date of Birth - Age	18-May-2014 - 10.37	Gender	Female
Handedness(R/L)	Right	Source of Referral	Dr Mohammadhasani
Initial Diagnosis	Anxiety-OCD-ADHD		
Current Medication	Medication Free		

Dr Mohammadhasani

## Denoising Information (EC)

Number of Eye and Muscle Elements			Low Artifact Percentage		
Eye	2	Muscle	0	0	
Total Artifact Percentage				High Artifact Percentage	
0					
<b>EEG Qual</b> i	ity	good		<b>Total Recording Time Remaining</b> 497.75 sec	

#### Pathological assessment for ADHD

#### **Compare to ADHD Database**

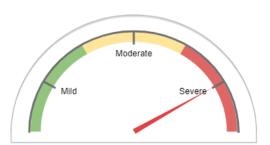

#### **EEG Compatibility with ADHD Diagnosis**

ADHD Table	EC				
Feature Name	Threshold	Region			
Increased rDelta	0.00	NAN			
Increased rTheta	0.00	NAN			
Increased rAlpha	0.00	NAN			
Increased rBeta	0.00	NAN			
Decreased SMR	-0.50	global			
Increased T/B Ratio	0.00	NAN			
ADHD 0 10	20	30 40 50 60 70 80 90 100 ADHD Compatibility			
ADHD Probability					

#### **Arousal Level Detection**

#### **ADHD Severity**

#### **ADHD Clustering**

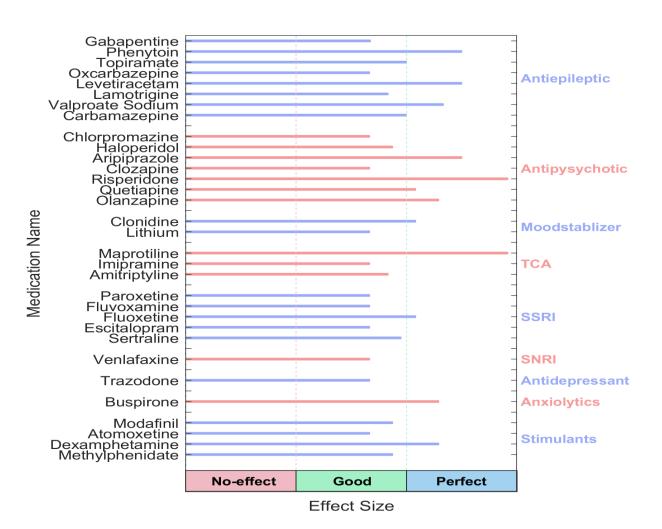

1.

<sup>\*</sup> If there is Paroxymal epileptic discharge in EEG data, this case needs sufficient sleep and should avoid high carbohydrate intake. You can consider anticonvulsant medications.

#### **QEEG** based predicting medication response

# Explanation

#### Medication Recommendation

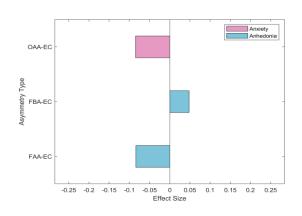

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

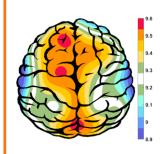

#### Alpha Asymmetry(AA)

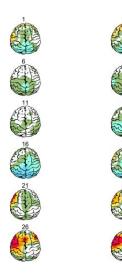

#### APF(EC)

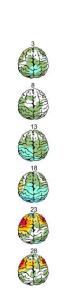

Frontal APF= 09.42

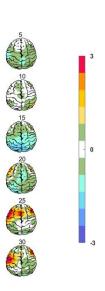

**Posterior APF= 09.50** 

#### Absolute Power-Eye Closed (EC) 🥟

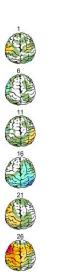

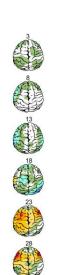

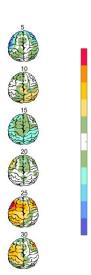

#### Relative Power-Eye Closed (EC) 🌮

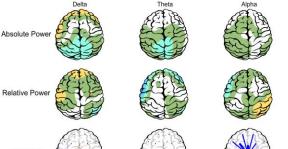

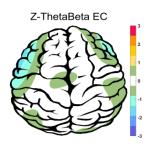

#### Z Score Summary Information (EC)

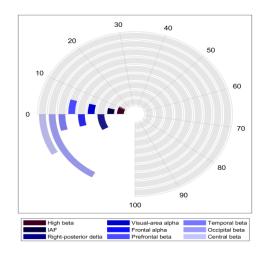

#### E.C.T/B Ratio ( Raw- Z Score)

# ThetaBeta EC 6.5 5 4.5 4 3.5 3 2.5

# Arousal Level

#### EEG Spectra
