

QEEG Clinical Report

BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Mohammadtaha Omidi	Date of Recording	16-Sep-2024
Date of Birth - Age	27-Nov-2012 - 11.8	Gender	Male
Handedness(R/L)	Right	Source of Referral	Dr AefeSafavi
Initial Diagnosis	-		
Current Medication	Medication Free		

Dr AefeSafavi

Denoising Information (EC)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements				Low Artifact Percentage	
Eye	0	Muscle	0		
Total Artifact Percentage				High Artifact Percentage	
EEG Quality		bad		Total Recording Time Remaining	
				161.31 sec	

Denoising Information (EO)

Raw EEG

Denoised EEG

Flat Channels

Rejected Channels

Number of Eye and Muscle Elements				Low Artifact Percentage	
Eye	2	Muscle	2		
Total Artifact Percentage				High Artifact Percentage	
EEG Quality		bad		Total Recording Time Remaining	
				172.74 sec	

Pathological assessment for ADHD

Compare to ADHD Database

EEG Compatibility with ADHD Diagnosis

ADHD Table	EC		EO	
Feature Name	Threshold	Region	Threshold	Region
Increased rDelta	0.50	global	0.00	NAN
Increased rTheta	0.00	NAN	0.00	NAN
Increased rAlpha	0.00	NAN	0.50	global
Increased rBeta	0.00	NAN	0.00	NAN
Decreased SMR	0.00	NAN	-1.00	global
Increased T/B Ratio	0.00	NAN	0.00	NAN

ADHD Probability: 0 10 20 30 40 50 60 70 80 90 100

ADHD Probability

Arousal Level Detection

ADHD Severity

ADHD Clustering *

1. May be anxious, inattentive, may be highly intelligent, need sufficient sleep, and should avoid high carbohydrate intake. Consider clonidine.
2. May be artistic/creative, may have affective regulatory dysfunction. May respond to SSRI.

* If there is Paroxymal epileptic discharge in EEG data, this case needs sufficient sleep and should avoid high carbohydrate intake. You can consider anticonvulsant medications.

QEEG based predicting medication response

Explanation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmacoe EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

Medication Recommendation

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

APF(EO)

Frontal APF= 10.83

Posterior APF= 11.12

APF(EC)

Frontal APF= 10.83

Posterior APF= 11.50

EEG Spectra

Alpha Asymmetry(AA)

Alpha Blocking

Z Score Summary Information (EC)

Z Score Summary Information (EO)

E.C.T/B Ratio (Raw- Z Score)

E.O.T/B Ratio (Raw- Z Score)

Arousal Level

Absolute Power-Eye Closed (EC)

Relative Power-Eye Closed (EC)

Absolute Power-Eye Open (EO)

Relative Power-Eye Open (EO)
