

QEEG Clinical Report BrainLens V0.4

Report Description

Personal & Clinical Data

Name	Ms Kiyani	Date of Recording	14-Feb-2024					
Date of Birth - Age	22-May-1994 - 29.73	Gender	Female					
Handedness(R/L)	Right	Source of Referral	Dr Qomi					
Initial Diagnosis	Depression-PIC							
Current Medication	Medication Free							

Dr Qomi

Denoising Information (EC)

Number of Eye and Muscle Elements				Low Artifact Percentage			
Eye	1	Muscle	2	0			
Total Artifact Percentage				High Artifact Percentage			
				0			
EEG Quali	ity	bad		Total Recording Time Remaining 83.98	3 sec		

Pathological assessment for mood disorders

EEG Compatibility with Depression Diagnosis

Depression Table	EC									
Feature Name	Threshold	Threshold Region								
Increased Global rAlpha	0.00	NAN								
Increased global rTheta	0.00	0.00 NAN								
Decreased rDelta	0.00	NAN								
Increased rBeta	0.00	NAN								
Left FAA	-0.94	Left FAA								
Right OAA	0.00	NAN								
Decreased Coherence (D, T)	-0.50	Decreased Coherence (D,T)								
Increased Coherence (A, B)	NAN									
depression 0	10 20	30 40 50 60 70 80 90 100 Depression Probability								
Depression Probability										

EEG Compatibility with Anxiety Diagnosis

EEG Compatibility with Mood Swings Diagnosis *

M	ood Swings Table	EC												
	Feature Name	Thresh	Threshold						Region					
D	ecreased rAlpha	-0.5	-0.50 LF-RF-O-											
Incre	eased (rDelta+rTheta)	1.0	0		RF-O-									
I	ncreased rBeta	0.0	0	NAN										
Decre	ased Alpha Coherence	-0.5	0	Decreased Alpha Coherence										
	Right FAA	0.0	0	NAN										
	BMD -		T	T		ı	ı		-	ı				
	0	10	20	30	40	50	60	70	80	90	100			
Mood Swings Probability														

* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

QEEG based predicting medication response

Explanation

Medication Recommendation

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

rTMS Response Prediction

Network Performance

Accuracy: 92.1% Sensitivity: 89.13% Specificity: 97.47%

About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.

Alpha Asymmetry(AA)
