

# Report Description

# Personal & Clinical Data

Name	Reza Omidi	Date of Recording	02-Sep-2024	
Date of Birth - Age	26-Dec-2006 - 17.68	Gender	Male	
Handedness(R/L)	Right	Source of Referral	Dr Mohammadhasani	
Initial Diagnosis		Anxeity. Substance diso	rder	
Current Medication		Medication Free		

Dr Mohammadhasani

# Denoising Information (EC)

Number	Number of Eye and Muscle Elements		Low Artifact Percentage			
Eye	2	Muscle	2	0		
<b>Total Arti</b>	fact Percentage	rcentage High Artifact Percentage				
()		(0)				
<b>EEG Quali</b>	ity	good		Total Recording Time Remaining	489.12 sec	

### Pathological assessment for mood disorders

### **Compare to Mood Disorders Database**

#### **EEG Compatibility with Depression Diagnosis**

# **EEG Compatibility with Anxiety Diagnosis**

### **EEG Compatibility with Mood Swings Diagnosis \***

Mood	Swings Table	EC									
Fea	iture Name	Threshold		Region							
Decre	eased rAlpha	0.00		NAN							
Increase	d (rDelta+rTheta)	0.00		NAN							
Incre	eased rBeta	0.00		NAN							
Decreased	d Alpha Coherence	-0.50	Decreased Alpha Coherence								
R	ight FAA	0.01	Right FAA								
	BMD 0	1 1	30	40	50	60	70	80	90	100	
Mood Swings Probability											

\* This index can only be investigated if there are symptoms of mood swings (R/O BMD or R/O mood swings).

### Arousal Level Detection

### QEEG based predicting medication response

### **Explanation**

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com .

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

### rTMS Response Prediction

#### Network Performance

#### About Predicting rTMS Response

This index was obtained based on machine learning approaches and by examining the QEEG biomarkers of more than 470 cases treated with rTMS. The cases were diagnosed with depression (with and without comorbidity) and all were medication free. By examining more than 40 biomarkers capable of predicting response to rTMS treatment in previous studies and with data analysis, finally 10 biomarkers including bispectral and nonlinear features entered the machine learning process. The final chart can distinguish between RTMS responsive and resistant cases with 92.1% accuracy. This difference rate is much higher than the average response to treatment of 44%, in the selection of patients with clinical criteria, and is an important finding in the direction of personalized treatment for rTMS.
