

## QEEG Clinical Report BrainLens V0.4

## Report Description

## Personal & Clinical Data

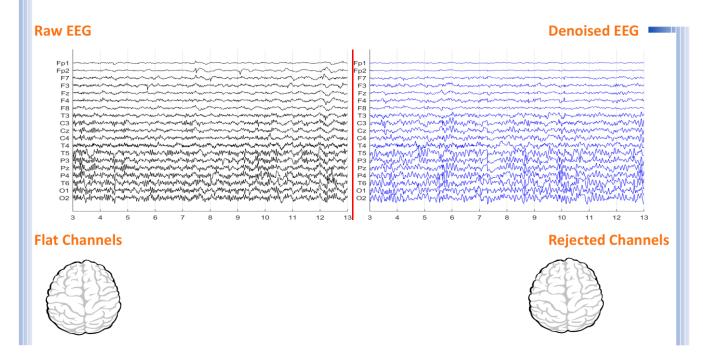

Name	Samra Naser	Date of Recording	31-Jul-2024	
Date of Birth - Age	21-Mar-2014 - 10.36	Gender	Female	
Handedness(R/L)	Right	Source of Referral	Dr Fallah	
Initial Diagnosis	Pseudoseizure, Atonic attack, Anxiety			
Current Medication	Medication Free			

Dr Fallah

## Denoising Information (EC)

Number of Eye and Muscle Elements		Low Artifact Percentage			
Eye	3	Muscle	0	0	
Total Artifact Percentage		High Artifact Percentage			
EEG Quali	ity	bad		Total Recording Time Remaining	509.10 sec

## Pathological assessment for ADHD

## Compare to ADHD Database

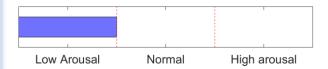

### **EEG Compatibility with ADHD Diagnosis**

ADHD Table	EC			
Feature Name	Threshold	Region		
Increased rDelta	0.00	NAN		
Increased rTheta	1.00	frontal		
Increased rAlpha	0.00	NAN		
Increased rBeta	0.00	NAN		
Decreased SMR	0.00	NAN		
Increased T/B Ratio	0.50	Fz		
ADHD 0 10	20	30 40 50 60 70 80 90 100 ADHD Compatibility		
ADHD Probability				

#### **Arousal Level Detection**

## **ADHD Clustering**

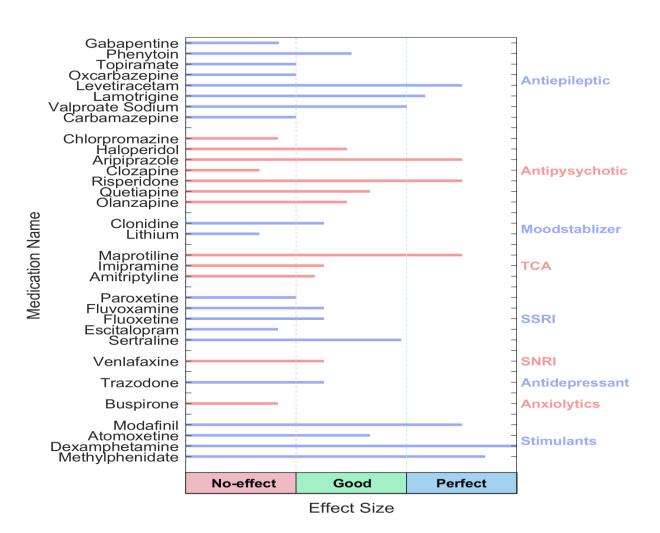

1. Same inattentive and hyperactive prevalence. Well respond to stimulants.

<sup>\*</sup> If there is Paroxymal epileptic discharge in EEG data, this case needs sufficient sleep and should avoid high carbohydrate intake. You can consider anticonvulsant medications.

#### **QEEG** based predicting medication response

#### Explanation

#### Medication Recommendation

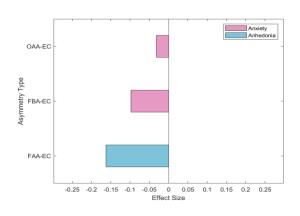

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.

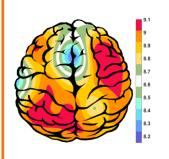

## Alpha Asymmetry(AA)

## APF(EC)

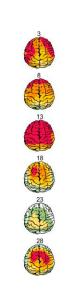

Frontal APF= 09.00

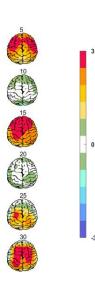

**Posterior APF= 08.88** 

## 🚃 Absolute Power-Eye Closed (EC) 🤣

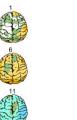

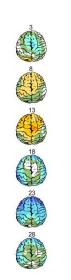

Relative Power-Eye Closed (EC) 🌮

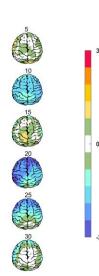

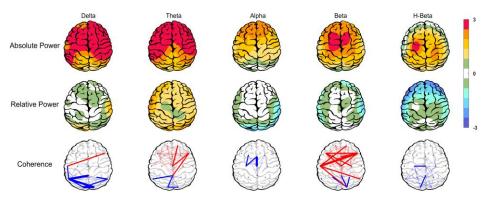

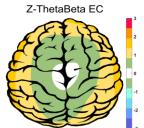

## Z Score Summary Information (EC)

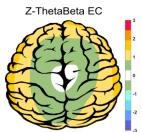

## E.C.T/B Ratio ( Raw- Z Score)

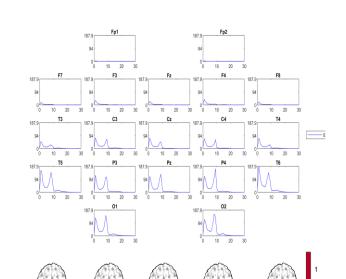

# ThetaBeta EC

## EEG Spectra

EC1

## Arousal Level
