

QEEG Clinical Report BrainLens V0.4

Report Description

Personal & Clinical Data

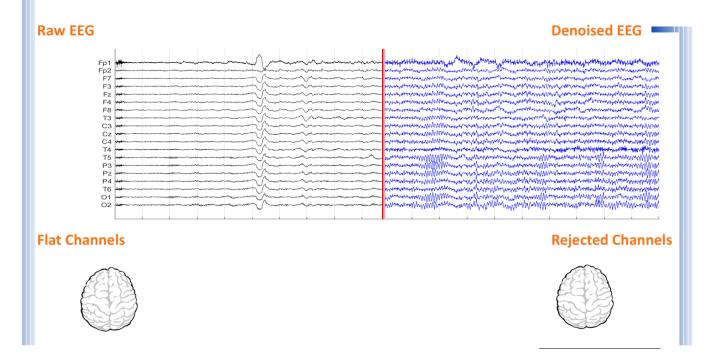

Name	Sheyda Sadri	Date of Recording	28-Feb-2024
Date of Birth - Age	19-Sep-1966 - 57.33	Gender	Female
Handedness(R/L)	Right	Source of Referral	Dr Dehghani
Initial Diagnosis		-	
Current Medication		-	

Dr Dehghani

Denoising Information

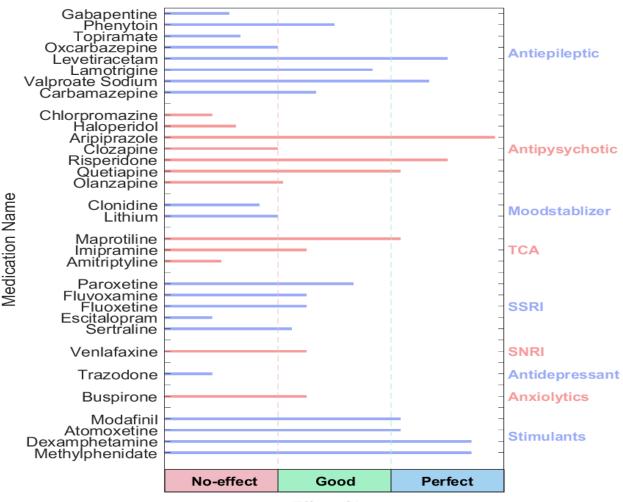

Number of Eye and Muscle Elements				Low Artifact Percentage	
Eye	1	Muscle	0	()	
Total Artifact Percentage				High Artifact Percentage	
				()	
EEG Quality good		Total Recording Time Remaining	174.62 sec		

QEEG based predicting medication response

Effect Size

Explanation

Medication Recommendation

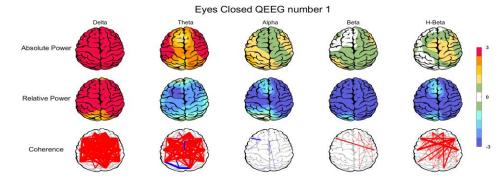

These two tables can be considered the most important finding that can be extracted from QEEG. To prepare this list, the NPCIndex Article Review Team has studied, categorized, and extracted algorithms from many authoritative published articles on predict medication response and Pharmaco EEG studies. These articles are published between 1970 and 2021. The findings extracted from this set include 85 different factors in the raw band domains, spectrum, power, coherence, and loreta that have not been segregated to avoid complexity, and their results are shown in these diagrams. One can review details in NPCIndex.com.

These two charts, calculate response probability to various medications, according only to QEEG indicators. Blue charts favor drug response and red charts favor drug resistance. The longer the bar, the more evidence there is in the articles. Only drugs listed in the articles are listed. These tables present the indicators reviewed in the QEEG studies and are not a substitute for physician selection.
